Drilling Continues to Expand Newly Discovered Cedar Vein Porcher Island B.C.

October 11, 2007 - Vancouver, British Columbia - Cross Lake Minerals Ltd. ("Cross Lake") is pleased to announce the additional assay results from the diamond drilling program on the recently discovered Cedar Vein on the Porcher Island Property (the "Property").

Drill holes CL-07-34 to CL-07-42 were planned to extend the newly discovered Cedar Vein along strike to the east. All drill holes intersected the gold bearing quartz vein system. Of particular interest are the wide zones of gold mineralization intersected from surface, which could potentially be developed by open pit mining methods. An analysis of previous drilling within the AT Zone also indicated the potential to outline similar wide zones of gold mineralization near surface. This new target will be a focus on ongoing exploration. The following table summarizes the significant results from drill holes CL-07-34 to CL-07-42:

Drill Hole	From (m)	To (m)	Interval (m)	Gold (g/t)
CL-07-34	4.67	28.90	24.23	1.62
and	104.88	107.26	2.38	26.07
CL-07-35	3.05	20.86	17.81	2.95
and	53.70	55.90	2.20	3.80
and	68.88	69.88	1.00	4.00
and	119.84	120.83	0.99	16.47
and	190.05	192.95	2.90	2.53
CL-07-36	3.05	27.46	24.41	2.23
and	35.96	40.03	4.07	4.21
and	109.16	113.25	4.09	3.59
and	134.00	135.00	1.00	6.65
and	143.26	146.19	2.93	4.34
and	192.07	193.36	1.29	8.47
CL-07-37	4.68	21.02	16.34	2.19
CL-07-38	5.76	29.58	23.82	3.37
and	39.65	40.90	1.25	4.37
and	81.53	87.80	6.27	2.41
including	81.53	83.08	1.55	5.57
and	91.48	97.12	5.64	3.32
including	95.32	97.12	1.80	6.28

including	9.9	11.67	1.77	6.81
including	24.30	25.55	1.25	4.13
and	106.29	107.75	1.46	5.37
and	117.02	118.05	1.03	11.77
and	153.86	155.00	1.14	6.31

Note: True width is estimated to be 70-75% of the drilled interval.

The Cedar Vein, which was discovered by Cross Lake late in 2006, has now been traced along a strike length of over 230m and to a depth of 150m. The vein is still open in both directions and correlates with the Dawson Workings, which were developed in the 1930's and are located a further 250m to the west.

On the Property, gold mineralization occurs in pyritic quartz veins within steeply dipping shear or alteration zones hosted by a quartz diorite intrusion. In 2007, Cross Lake completed a total of 12,113.13 meters of diamond drilling. Drilling results have confirmed the continuity of the AT system both laterally and to depths of over 300 meters and resulted in the discovery of the new Cedar Vein. Further exploration drilling will focus on expanding the AT and the Cedar zones, and extending the wide zones of gold mineralization near surface which may be mineable by open pit methods. In addition, a conventional and Mobile Metal Ion soil survey were completed in July, which will be used to expand the current areas of mineralization and identify new target areas.

The Property, at the northwest corner of Porcher Island, is located in the Skeena Mining Division, 35km kilometers south-southwest of Prince Rupert, British Columbia. The Property is accessible throughout the year and includes a 12 person camp.

Assaying is completed at ACME Analytical Laboratories Ltd. using initial fire assaying (Group 3B) followed by metallic gold assay of samples greater than 5g/t gold. Exploration work is conducted under the supervision of the
